11 Tools & Checklists

PULSE by ITAVI

in **Significant Impact Group(s):** Biosecurity

Species targeted: Poultry;

Summary: PULSE, a tool created by ITAVI in France:
The application of biosecurity measures in animal husbandry aims to prevent or limit the introduction, circulation and dissemination of contaminants. To help farmers assess the conformity of their farming systems and practices, a biosecurity self-assessment tool has been built, including all of the expected recommendations. It was conceived as a tool for progress, making it possible to target the points to be improved in the short or medium term and proposing ways of improvement to be discussed, in concert with technical supervision.
The purpose of this tool is to support producers in the implementation of biosecurity procedures and to maintain vigilance over the long term.
