13 Farm Innovation

Predict and Prevent by Prognostixs

in **Significant Impact Group(s):** Housing and welfare \ Climate ;
Precision Livestock Farming & Early detection

Species targeted: Poultry;
Age: Young;Adult;

Summary: Predict and prevent by Prognostixs:
The data captured from all the sensors is clearly visualised through our PrognostiX software application and can be integrated into other existing software platforms.
Tracking and analysing performance is a key aim with the Predict & Prevent Platform. The solution measures and compares key environmental and health indicators captured by the sensors or manually input via a mobile tablet device to improve efficiency and allow for rapid and informed on farm management decisions.
Key features, among others, are:
•   Quick access for multiple herds across hundreds of farms across the UK via a single dashboard anywhere in the world (customizable to exact requirements)
•   Software instantly transforms data inputs into clear, visual representations that enable users to monitor performance over time and quickly identify trends or discrepancies
•   In-built alert system allows user to easily identify where data readings fall outside thresholds i.e. where performance is off target
