

15 Farm Innovation

GVET by AACTING

in **Significant Impact Group(s)**: AMU reduction strategies \
Monitoring and surveillance \ Antibiotic use

Species targeted: Pigs;

Age: Young;Adult;

Outcome Parameter(s): It effects social and/or public health positively.

Summary: GVET is a voluntary, computerized register for all the treatments in pig farms. It is active since early 2017, and is run by the French Institute for pig and pork Industry (IFIP) in cooperation with The French Agency for Veterinary Medicinal Products, the French Agency for Food, Environmental and Occupational Health & Safety (ANSES) and Isagri, a private software company.

Datacollection is available for subtopics like weight categories (sows, fatteners, weaners and sucklers) and input is asked about antibiotic treatment (like dosage, date of administration, duration, reasons of treatment, etc.).

Analysis is used for farmers and for national and European purposes. Also benchmarking will be performed.
