in **Significant Impact Group(s)**: AMU reduction strategies \
Monitoring and surveillance \ Antibiotic use

Species targeted: Poultry;

Age: Young;Adult;

Outcome Parameter(s): Effects social and/or public health positively.

Summary: A tool for monitoring the use of antibiotics in poultry farms

The objective of the RefA²vi project is to build a tool for monitoring the use of antibiotics in livestock poultry, allowing industry professionals to have precise and reliable national references, expressed by the through one or more indicators in accordance with national and European recommendations.

It's about:

- for farmers: to situate the level of use of antibiotics in their farms and its evolution;
- for the sectors: anticipate crisis situations, changes in regulations, target actions to be taken to develop practices, and to promote the efforts made by the profession to consumers.
