

22 Farm Innovation

PartAge by ITAVI

in **Significant Impact Group(s)**: Biosecurity

Species targeted: Poultry;

Age: Young;Adult;

Summary: Biosecurity in poultry farming: a participatory approach to promote compliance

The objective of the PartAge project is to offer a support method based on a participatory approach, for a sustainable change in biosecurity practices in poultry farming.

This 3-year project will test the impact of participatory meetings on changing practices, compliance and the perception of biosecurity, organized with two groups of conventional poultry and outdoor poultry farmers. These meetings should make it possible to compare experiences, increase awareness and encourage the involvement of breeders in a process of progress.

At the end of the project, a tool for organizing and leading participatory meetings will be created to be used in steps to improve biosafety by technical support teams.
