

Disseminating Innovative Solutions to Antibiotic Resistance Management

It is time for the spring relaunch!

John Muir once said, "spring work is going on with joyful enthusiasm" and it is nothing less with our DISARM spring relaunch. We have continued to promote DISARM at third party events, the [Community of Practice](#) has reached 477 members, and new webinar recordings and best practice videos are now available on our [YouTube channel](#).

Check out some of our latest updates in more details below...

People behind DISARM

Our team member Lisa Morgans, livestock vet and Head of Livestock at Innovation for Agriculture (IfA) gave an interview to The Alliance to Save Our Antibiotics about her perspective on antimicrobial resistance (AMR) and the response to the Covid-19 pandemic.

In her words: *"The public's understanding of pandemics, vaccination and disease spread during COVID is transferable to AMR, so I imagine many people will now be able to better appreciate interventions to reduce AMR."*

Working together for livestock health and AMR reduction

Restriction on physical meetings due to COVID-19 have not prevented us from reaching you online. We have continued to organise webinars, including one on how we can work together to improve livestock health and reduce antibiotic resistance.

In this event, we shared more information about the DISARM project and our work, followed by an interactive Q&A session – the key message: join our network to share your insights into animal health and antibiotic resistance!

Did you miss it? No need to worry, the recording is available on our [YouTube channel](#).

We Need You!

Strategic communication, dissemination and exploitation

Best practice abstracts

Farm Tour

In 9 European countries, farmers, veterinarians, feed advisors and coaches are working with the DISARM multi-actor farm health team approach to improve animal health.

A Dutch DISARM pig farmer shows his farm in this video.

Interesting discussion on the Community of Practice

Members are continuing to share interesting news and discuss the topics regarding animal health and the reduction of antibiotic use.

One example are [tips shared by Ozolea](#) for the management of chronically high somatic cells in lactating cows, with the aim of improving animal health and welfare and fighting AMR.

You can still join the Facebook community. Not on Facebook? Check out the CoP summaries available on the website.

We were there: SCAR Collaborating Working Group on Animal Health and Welfare Research

We presented the DISARM Project and its objectives at the meeting of the Standing Committee on Agricultural Research (SCAR) Collaborating Working Group on Animal Health and Welfare. The aim of this group is to provide a forum leading to improved collaboration on research prioritisation and procurement, creating the necessary critical mass and focus to deliver the animal health and welfare research needs of the policy makers and the European livestock industry.
