

140 Tools & Checklists  
**Biosecurity Practices for Dairy Operations**

by Texas AgriLife Extension

In **Significant Impact Groups:**

Biosecurity \\  
Species targeted: Dairy;Beef;  
Age:

**Summary:**

Biosecurity measures prevent infectious diseases from affecting a herd. By implementing general management and vaccination practices, producers protect their herds from existing diseases within a country and from possible foreign animal disease outbreaks. This US made checklist and fact sheet contains information on herd immunity, common diseases, vaccination protocols, best practice animal husbandry, key steps to take when purchasing animals, biosecurity practices and staffing. It includes helpful tick lists of what steps you can take to ensure disease does not enter, spread or multiply on your farm.
