

163 Tools & Checklists

Best-practice framework for the use of vaccines in animals

by EPRUMA - European Platform for the Responsible Using of Medicines

In Significant Impact Groups:

Pathogen management \ Vaccination

Species targeted: Pigs;Poultry;Dairy;Beef;Sheep;

Age:

Summary:

Vaccination has been an essential tool over the years for preventing a wide range of infectious diseases. By helping to eradicate and control infectious diseases, vaccination improves animal health and reduces the need for treatment, while contributing to food safety and public health. Veterinary vaccination is also an integral part of overall One Health plans against infectious diseases. Within EPRUMA best practice guidelines, EPRUMA partners wish to raise awareness on the benefits of vaccination, and recommend best practices for vaccine use to ensure optimal animal health. These best-practice recommendations also aim to complement existing guidelines on vaccination, which are available in many European countries (France, UK (RUMA), Vetresponsable (Spain), AMCRA (Belgium)).
