Probiotika

by Aarhus Universitet

In **Significant Impact Groups:**

Specific alternatives \ Pre-/probiotics

Species targeted: Dairy;Beef;

Age: Young;

Summary:

The article describes as probiotika tested in calves from 4 weeks to 10 weeks old. The calves in the test had a higher level of yeast cells in the intestines, but the insidens of diarrhea was low in both calves fed the probiotic and in calves with out. They have tested 150 calves from 0-4 weeks but the results are not accessible yet.
